# 100 % IN HOUSE

## Premium charging solutions engineered & made in Germany

Technagon stands for proven, reliable products in premium design - suitable for all applications in the public as well as in the semi-public sector. As a developer and manufacturer, we combine the complete know-how in-house: from mechanical and electrical design, software and hardware development to production. Our customers also benefit from the revolutionary service concept of the new product generation.

## Our vision

### Shaping a sustainable world together

---

Electric mobility is a crucial step towards a greener future. Technagon's charging solutions are designed to make a decisive contribution to this more sustainable world.

## Our mission

### Simplifying electric mobility

---

As pioneers in our industry, we want to lead the way with technologies that take us, our partners, customers and the entire e-mobility community a decisive step further. Solutions, which simplify the issues of charging, calibration and service.

## How do we achieve this?

### With great engagement, cohesion and the vision to create something revolutionary!

---

Our team consists of passionate experts who work together in a family atmosphere to realize our common goals. In-house development of premium hardware and the associated software ensures optimal interaction and meets the highest standards of aesthetics, durability and innovation.

# Technagon charging stations - AC

## Technagon P40 \*

Our high quality standard charging station

The Technagon P40 impresses with its intelligent, modular concept, which decisively simplifies the issues of service and calibration law.

Technagon's charging solutions are made of robust, sustainable materials and are ideally suited for use in public and semi-public areas.

All of our charging stations are, of course, LSV-compliant.

## Technagon P45

Charging station with house junction box

A house junction box is integrated as standard in the Technagon P45. This enables the utility company to connect the power supply directly to the charging station without the need for a house connection.

The Technagon P45 can thus be used universally at any location.

## Technagon W40 \*

Wallbox for mounting on wall or pedestal

When mounted on the wall, the Technagon W40 avoids the need for underground work and foundation.

As a special solution, two wallboxes can be installed on the Technagon design pedestal, which enables the provision of four charging points in the smallest possible space.

## Technagon P80 \*

Charging station with 46 inch advertising display

The impressive Technagon P80 with integrated 46" display is popular in high-traffic locations. The unique charging station is a real upgrade for every parking lot.

Especially convenient: the rental of advertising slots can be used to refinance your purchase.

best of the best

## Find your ideal solution:

### Cities & Communities

At Technagon, you benefit from standard-compliant charging stations with a reliable service concept. The integration of a central payment terminal enables the use of a wide range of payment methods. With the Technagon P45, you are completely flexible with regard to the installation location thanks to the built-in house junction box.

### Companies

Whether charging stations for your company fleet, charging options for your employees or for external visitors - with Technagon's charging solutions, you are equipped to meet individual requirements. Our smart load management enables efficient distribution of charging flows.

### Hotel business & gastronomy

With Technagon charging solutions, you not only offer your guests reliable charging options, our premium stations in high-quality design are a real upgrade for your parking lot. Perhaps you would like to have the imposing Technagon P80 with integrated advertising display?

### Real estate industry

Impress your tenants with Technagon's reliable charging solutions. Transparent, legally compliant billing between tenant and owner is automated via the respective backend. Particularly ingenious: By using two Technagon W40s on one pedestal, you can create four charging points in the smallest space!

# THE CHARGING MODULE

Revolution for calibration law and service

## The new modular Technagon product series

---

The modular concept of the new Technagon charging generation offers decisive advantages. The charging module contains all components relevant for the charging process - such as display, charging controller, meter, RFID reader and charging socket or charging cable. This closed unit is certified separately by Technagon in accordance with calibration regulations.

## CHANGE & CHARGE Service made easy

---

When servicing is required, the charging module can be quickly replaced by simply loosening two plugs and four screws, without the need for a new calibration procedure.

**A solution that is fast,  
simple and very convenient!**

# DESIGN MEETS HIGHTECH

Best of hardware and software combined

## Own charging controller in fifth generation

At Technagon, hardware and software come from a single source - resulting in high-quality and future-proof solutions.

OCPP 1.6 enables precise connection to all common IT backend providers.

## The charging infrastructure with the plus in intelligence

Our connected solutions integrate seamlessly with existing energy management systems and optimize electric vehicle charging. This includes dynamic load management, access control and billing functions.

Certified to ISO 15118, our stations are ideally prepared for technologies that make electric car charging more efficient, easier and more grid-friendly - such as plug & charge, smart charging and bidirectional charging.

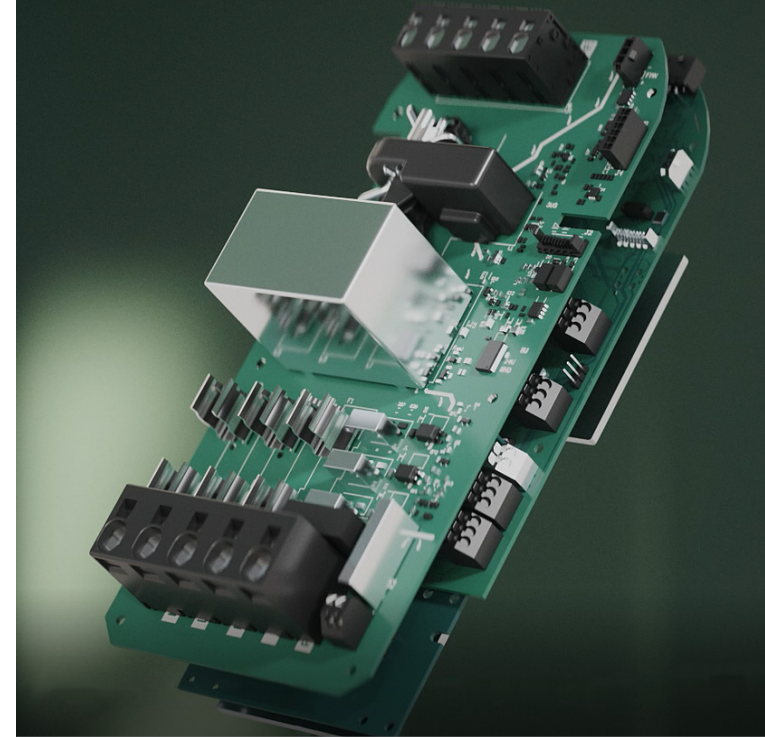

## Individual & original: Charging station in your design

There are no limits to creativity! Whether your logo on the charging station, the charging pole in an all-over look matching the design of your company or the production of a station in your desired color - Technagon offers numerous possibilities for individualization!

## Carefree payment: Universal. Intuitive. Transparent.

By integrating the Pay-t payment terminal, our charging stations allow the use of a wide variety of payment methods. Whether RFID or fleet cards, giro cards or credit cards - from now on, you pay the way you want!

Billing by the kilowatt hour and the integrated pre-authorization function promise maximum transparency.
